

Nearly 3 in 4

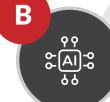

Energy & Utilities organisations say Al is a strategic priority, but...

Every **1 in 2** of AI POCs don't make it to production.

Enterprises take >7 months to convert Al initiatives from prototype to production stage.

Only 2% have successfully been able to do it!.

We can help you buck the trend!

There are **5 key** impediments for enterprise-level AI adoption in the Energy & Utilities sector:

Al Awareness & Understanding

- Lack of AI literacy hinders adoption of multiple AI initiatives.
- There is a lack of depth in training & understanding the value that Al can create for grid optimization, smart metering, and customer engagement..

Al Acceptability

- Impact of AI understood by IT personnel, but no buy-in from functional teams.
- Lack of transparency, unreliability, limited reasoning capabilities in critical infrastructure applications.

Organisational Capabilities

- ∠ Lack of skillset & resources to leverage AI methods.
- Al adoption requires defined roles based on specialisation & accountability.
- Inability to implement AI at scale after successful pilot stage.
- High cost & energy consumption of AI models raise affordability & sustainability concerns for large-scale deployments.

Technical Capabilities

- Inability to leverage advanced analytics & AI due to legacy systems, poor data quality, lack of well-defined frameworks for real-time data processing.
- Lack of quality, volume, & suitability of data for training energy consumption prediction or grid management models.
- Multiple AI tools and platforms being used which don't have latest features.

AI, Security, & Trust Ethics

- Lack of Al governance, risk management, compliance with industry-specific regulations.
- Security, ethical model behaviors, model autonomy & change management practices aren't addressed effectively in sensitive energy data environments.

"Al remains challenging for many organisations as it take a long time to go from prototype to production. Estimating and demonstrating business value from Al projects remains as a major barrier to Al implementation"

Maximising real time insights to drive revenue alongside better CX

Unlock your enterprise's potential with our Pro bono, no-obligation **Al Readiness Assessment**, designed to identify key challenges and provide actionable recommendations for a successful Al adoption in the context of real-time insights for revenue growth and enhanced customer experience.

Why is this assessment key for your enterprise's AI strategy?

Identify barriers that are impeding the effective adoption of AI and uncover tailored recommendations to navigate challenges and drive sustained success in your AI journey.

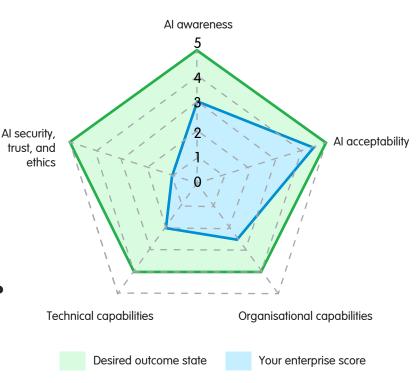

2 How does it work?

We'll make a comprehensive assessment of your enterprise's AI readiness based on the 5 key impediments and determine where you stand in comparison to the desired outcome state.

3 What will the final results reveal?

Your enterprise score on all the 5 impediments, the roadblocks, and strategic recommendations.

Here's a sample output

Gaps

- The enterprise lacks a depth in understanding how and where Al can create maximum impact on energy efficiency and customer satisfaction.
- The enterprise's stakeholders are willing to embrace & experiment with AI but there is a lack of confidence on decision making abilities of different AI models
- Insufficient AI expertise & skills within the enterprise to understand how to build, deploy, maintain AI models.
- The enterprise has inadequate data infrastructure and lacks the right tools & platform capabilities to implement AI at scale.
- Due to the absence of structured Al governance, enterprise is prone to security risks, inconsistent performance of Al models, and bias & fairness concerns that can hinder reputation.

Recommendations

- Offer specialised training & workshops to build foundational knowledge on how & where Al would deliver value in the Energy & Utilities landscape.
- Demonstrate how AI adoption is closely aligned with enterprise's business goals. Ensure that AI systems are transparent, especially in how they make decisions to instil trust among stakeholders.
- Re-define roles & build accountability for Al adoption, upskill and re-skill workforce, and encourage experimentation in Al.
- Bridge technology gaps by partnering with specialised vendors who can establish robust infrastructure for data and seamlessly integrate tools & platforms into existing systems for AI adoption.
- Plan and implement strong Al security measures, build ethical Al frameworks, and address Al bias & fairness through strict auditing.

Getting your AI projects off the ground to transform organisational efficiency and consumer outcomes

Our comprehensive AI services are designed to help businesses like yours stay competitive in today's data-driven world, with tailored solutions that deliver measurable outcomes for the Energy & Utilities sector.

Data & model assessment

Includes data quality profiling, data catalogue, data ownership, and multiple model assessments.

capability

Use case discovery

Al-driven intent identification and scoring based on productivity, decision making, customer experience, and product innovation.

Use cases are listed and prioritized by Al suitability, feasibility, impact, and time to market.

Platform & tools assessment

Identifies tools for LLM calling, development platforms, utilities for model fine tuning, etc.

People capability & org structure assessment

Includes AI org assessment, skills assessment, role definitions & team structure.

Organisational AI process review

ML ops - Data capture during model development / experimentation &, validation, feature store, model registry and so on.

Controls - Data access, Guidelines on use of 3rd party hosted models, AI Ethics etc.

Al roadmap & research support

Includes end state with AI products and offerings, near term backlog definitions, timelines, Build vs. buy decisions for tools, research support on SLM, next gen models, multi-modality and so on.

Development

IDE with AI support, AI framework plugins, Model Zoo, Starter codes, Prompting tools & history, Guard rail filters.

Unified data lake

(Data catalogue & Access control at Granular level) and Cloud Platform.

Al libraries integration

ML, LLM, Vision, Speech, Reinforcement Learning.

Model governance

Model inventory, Model registry, Model monitoring, Usage reports, Feature store, doc stores, Vector stores.

ML Ops

Code repo integration, Auto ML experiment tracking, testing deployment, Model serving, Pipeline orchestration.

Support

Includes setting up alerts & thresholds (model performance & stability), and model retraining.

Preparation

Ideation: Identify data sources, review compliance, conduct user research, and finalize features with stakeholders.

Development

Experimentation: Data analysis, feature engineering, model

testing, tuning

Build: Data cleanup, pipeline development, monitoring setup **Validation**: Precision testing, overfit check, model comparison

Deployment

Pipeline: Production ready model pipeline

Test Instance: Feature store integration, endpoint setup, non-functional testing

Production: Model registration and deployment

To drive operational efficiency

Solutions including multi layout document parsing, Al agents, synthetic data generation & so on.

To enhance customer experience

Recommendation engine.

2 NEW 2

4
Pre-built Solutions

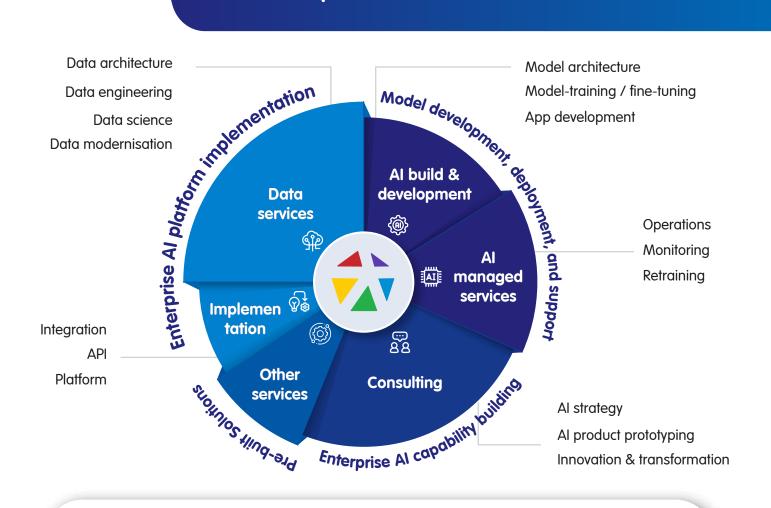

To improve decision making

PII data masking, Accounting data classification, CV shortlisting.

Your Al journey made easy in Energy & Utilities Trust us to deliver each step, from vision to execution!

About US

Centelon Solutions is a trusted business-technology solutions partner, helping large to mid-size organisations across various industry verticals in their digital transformation journey. Our core strength lies in aligning technology with investment goals and defining a strategic roadmap to continuous transformation. We aim to integrate digital technology built on a foundation of our own platforms and IP, combined with best-of-breed COTS solutions, into all areas of businesses to deliver better customer value.

We work with customers to keep pace with new trends and achieve dynamic objectives such as: higher and faster value with business-driven technology implementation using agile methodology and DevOps; technology excellence through automation, continuous delivery, application modernisation, and leveraging next- generation technologies; as well as enhanced cost optimisation through reduced cost and improved quality with cutting-edge proprietary accelerators and platforms.
